

The only source for real-time flight status notification

OAG Flight Status is the single source, real-time system for flight status information including cancellations, delays and terminal changes.

How does OAG Flight Status work?

The moment a delay, cancellation, or terminal change occurs, a message is immediately generated updating the OAG database. **OAG Flight Status** then converts this information into a standard XML format for easy integration into any technology platform. The **OAG Flight Status** database receives and stores change information for flights up to 24 hours after arrival.

OAG Flight Status:

- Provides a single consolidated source of flight status data
- Is delivered in a consistent and easy to integrate XML format
- Means you only have to integrate a single feed source

OAG Flight Status is available in the following formats:

- **OAG Dynamic Flight Status**
A consolidated feed of real-time flight status data delivered directly into a host system.
- **OAG Flight Status OnDemand**
Provides instant access via a web service to the very latest flight status data via a direct link to the OAG database.
- **OAG WebFIDS**
FIDS is a web-based application hosted by OAG and customized to meet customer requirements. With an easy-to-use interface, each customer can create, modify and manage all aspects of their screen layout and content including sorting options by airline, airport or flight time.
- **OAG Flight Status alerts**
This tool can provide your on-the-go customers with up-to-date flight information. It “pushes” status messages to customers by SMS to the user’s mobile handset, or by email to their handset or email account.
- **OAG Historical Flight Status**
Whether you need to analyze your own company’s performance, monitor competitors or assess potential partners, our Historical Flight Status data puts all the information at your disposal.

"With the OAG Flight Status Database I have real-time access and one reliable source to all flight status changes, including gate details so my operations run smoothly and efficiently."

Susan Newport
Airport Director

OAG Flight Status — one source, one solution

Includes daily base schedule updates in same XML format.

- Produces changes up to 48 hours prior to departure and 24 hours after arrival
- The most up-to-the-minute and reliable flight status available
- Information delivered on a single segment or entire leg of flight
- Backed by 24/7 customer support
