

The easy way to promote your route network

OAG ARCS provides airlines with a complete service ensuring their routes have maximum visibility in the neutral and carrier specific displays in the GDS.

OAG ARCS is a one-stop shop delivering routing files for your airline directly to each GDS. It will help you to maximize your booking potential and increase revenues on the routes of your choice.

Tell us what you want to achieve and OAG will take care of the rest.

Features:

- Uses current schedules and MCTs from OAG's renowned database to ensure all routes are valid
- Uses the most up to date schedules for over 1,000 airlines worldwide
- OAG's Schedules Database holds details for over 28 million annual flight departures
- Connection generation based on customers' requirements
- Single & double connection generation available
- Able to prioritize online and interline connections and those involving code share partners
- Files are formatted uniquely for each GDS
- Automated transmission to each GDS
- Comprehensive reports are available

Customer Options:

- Global routings or specific coverage
- Online or interline connections
- Single or double connections
- Ability to specify preferred partner airlines
- Parameters may be varied for each recipient GDS
- Delivery frequency – monthly, quarterly, annually or ad hoc

Benefits:

- Increased sales potential by exposing the most profitable connection routings
- Ensures immediate display of new routes
- Highly cost effective solution
- No hardware, system or development costs incurred
- No manual input or other operational costs required
- Customized deliveries to each GDS helps your airline display multiple sales profiles
- Helps to maintain up to date GDS coverage for your connection routes
- Priority sequencing ensures optimum connection display
- No supplementary feed to GDS is necessary
